

Custom hydraulic test kits

If you are using diagnostic test equipment, there is a very high chance that you will be using it for field service, wherever that may be. It is important that when you get on site, the equipment is easily and quickly accessible and ready to use.

In response to customer demand, Webtec offers individual kits to store and easily transport your hydraulic test equipment on-site. So, now rather than having several separate boxes to carry you can have a dedicated kit to manage the transport of your test equipment using the internationally renowned Pelican™ case system.

The Pelican™ cases are rugged, durable, waterproof and airline approved, ensuring that you arrive on-site with your Webtec test equipment intact and ready to use, no matter what the conditions. On the larger Pelican™ cases, a set of wheels and a carry handle are also included for even easier transportation.

Standard DHCR kit with high density foam

Low-volume HPM540 kit with Pick N Pluck™ foam

Once you have decided on the test equipment that you need, Webtec will design, free of charge, a kit to hold all the test equipment including sensors, cables and ancillary equipment neatly protected with customised foam compartments, all enclosed by a suitably sized Pelican™ case. We have solutions suitable for low volume and high volume kits, using Pick N Pluck™ foam or machine cut high-density foam. In certain applications, we can even brand the Pelican™ case with your company logo if required.

While the cost of the Pelican™ case is chargeable, the design layout, manufacture and assembly of the kit for all the associated components is free. We believe that to purchase the case is an investment in not only protecting your valuable test equipment, but also for the time saved when travelling on-site.

At Webtec, we are not satisfied with just selling our products, we aim to sell a complete solution for your application.

Why not challenge us to build your custom diagnostic kit today?

Call your local Webtec sales office to discuss your requirement.
